Dakota Sink Corner Radius Info

CORNERS		
Regular(Standard) Radius  <p>standard 4.5" corner radius</p> <p>Approximately 4-1/2" rounded corners. (most commonly used sink nothing fancy)</p>	Micro Radius  <p>10mm-15mm corner radius</p> <p>1/2"- 5/8" rounded corners (slight curve in the corners) easier to clean in the corners</p>	Zero Radius  <p>zero degree corner radius</p> <p>Sharp 90 degree corners (no curve). More of an industrial look</p>

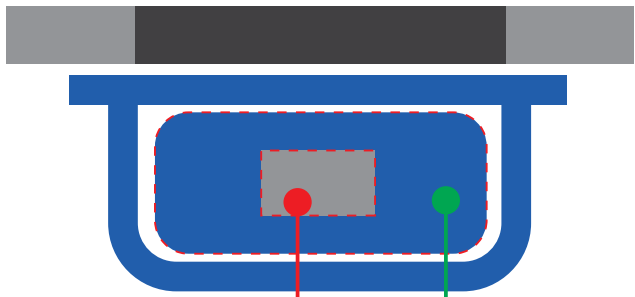

Dakota Stainless Steel Info

Material		
18/10 Chromium/Nickel Content  <p>18% chromium gives shine, while 10% nickel provides durability. Both provide rust resistance.</p>	304 Stainless Steel 18% Chromium, 10% Nickel Prevents Rust  <p>Stainless does not "rust" as you think of regular steel rusting with a red oxide on the surface that flakes off. Corrosion is generally caused by contaminants settling on the surface of the stainless steel</p>	Gauges Lower Number = Thicker Material  <p>The lower the number, the thicker the gauge is.</p>

Standard Types of Sink Installations

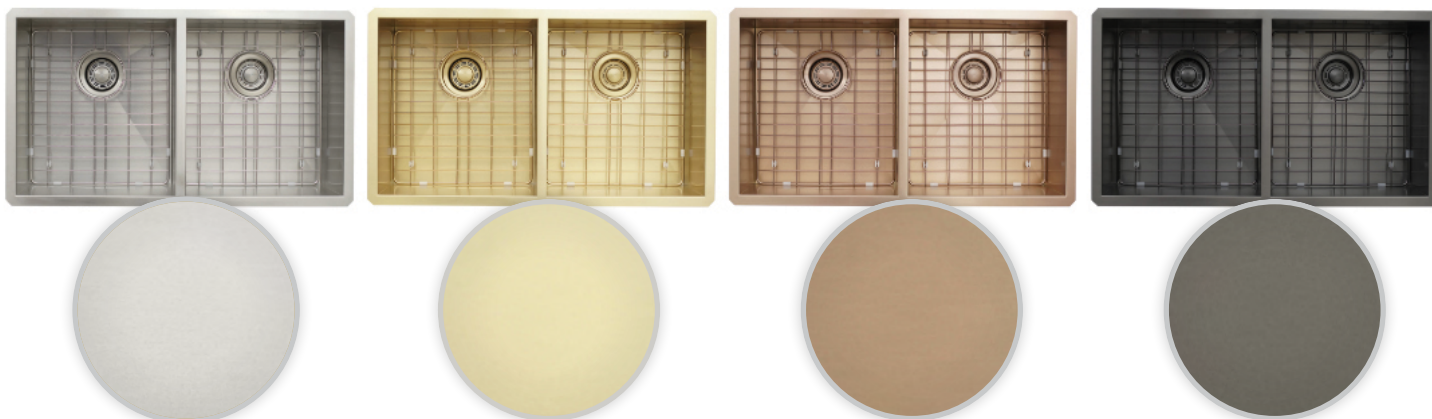

INSTALLATION TYPES		
Top Mount 	Under Mount 	Apron Front (farmhouse style) 
Most commonly used when replacing a sink but not replacing the counter top	Most commonly used when redoing the counter top. Clean look no bulky flanges exposed	Exposed front apron, and mounted underneath the counter

Engineering our Products for Excellence

SOUND PROOFING & INSULATION	
Sound Dampening Pads  Them Us	Thermal Undercoating 
Sound Pads are adhered to all sides of the bowl to reduce noise from things hitting the metal. Dakota uses extra large pads for supreme sound deadening.	The undercoating helps maintain water temperature in the sink. Without the undercoating, the sink material will cool the water faster than with the coating. The material also prevents condensation build up. When the water cools, it will collect on the underside of the sink and drip onto the wood cabinetry, sometimes causing mold. The coating prevents this condensation buildup.

SHADES OF STEEL

COLORS YOU NEED TO SEE TO BELIEVE

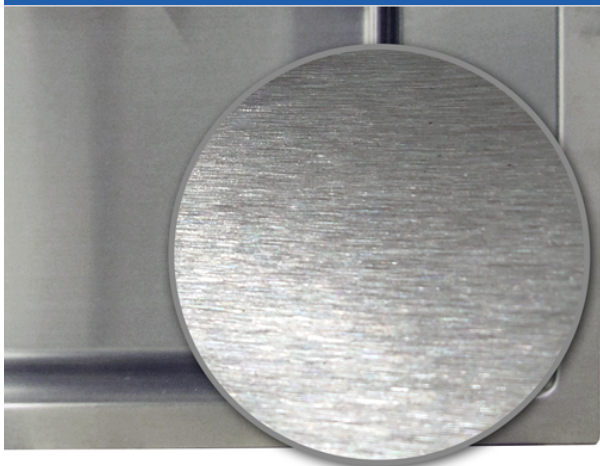

Welcome to the all new beautiful arrangement of color options for Dakota's Signature Collection of Handmade Stainless Steel Sinks

Create inspiration with a new look in your kitchen. Add color where you were not able to before. Our durable colored sinks allow you to have a unique and functional kitchen that will set you apart from everyone else. When the lighting hits the sink, it creates a variety of shades that give your boring kitchen a life of its own.

BOWL CONFIGURATION			
50/50 2- equal bowls (most common)	60/40 1 bowl slightly larger than the other bowl (Preference) Large bowl on the left	70/30 1- large bowl for bigger work space, 1- small bowl usually for washing off food products Large bowl on the left	Offset The backs of both bowls DO NOT line up (usually applies to 60/40s, 40/60s, 70/30s, & 30/70s).
Single 1- large bowl for people who want a large work space	40/60 the reverse of the 60/40 Large bowl on the right	30/70 the reverse of the 30/70 Large bowl on the right	Straight Cut The backs of both bowls DO line up (usually applies to 60/40s, 40/60s, 70/30s, & 30/70s).

WHAT'S THE DIFFERENCE?

Genesis Standard Brushed Nickel Finish

Textured

Dakota's [Standard Brushed Nickel Finish](#) has the classic brushed texture. This also gives the sink a textured feel that hides wear and tear from heavy prolonged use.

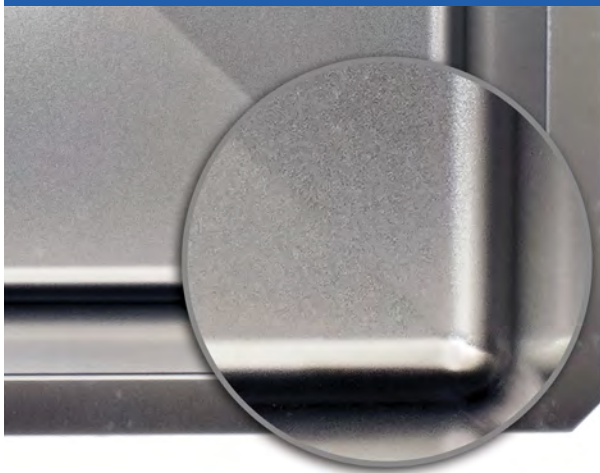

Signature Satin Brushed Nickel Finish

Smoothie

Dakota's [Satin Brushed Nickel Finish](#) has a high gloss coating over the classic brushed texture. This makes the sink smoothie to the touch and give a high visibility shine with the appearance of brush strokes.

Signature Shades of Steel Silver Finish

Sparkly

Dakota's [Shades of Steel Silver Finish](#) is characterized by its polychromatic appearance. This metal flake-like coating produces multi-faceted hues from different angles making it visually stunning from every angle.

Dakota™
PLUMBING PRODUCTS
"Quality for Life"

Heavy-Duty Stainless Steel:

Industrial-grade T304 stainless steel is durable and dent-resistant.

Extra-Thick 16 Gauge:

True 16-gauge thickness for superior strength and durability.

Superior Drain Channels

Expert-designed channels rapidly and effectively drain water, decreasing the formation of pools.

PeaceKeeper™ Soundproofing Technology

Reduces sink noise while in use.

Commercial-Grade Finish

Highly scratch and stain resistant. Easy to clean satin finish.

Designing a Stylish Kitchen

The kitchen is one of the most often used rooms in the house, so it demands a design that is both inviting and practical for the home chef. Kitchen appliances, faucets, sinks, and even hardware all work together to create a stylish and practical space for preparing and serving delectable meals to friends and family.

Steps to Designing a Kitchen

Make a Design Plan

Every kitchen should be set up in such a way that the flow and transition from the refrigerator to the range to the sink to the dishwasher is seamless. The sink and dishwasher should be placed side by side in a triangle layout to enhance efficiency in the kitchen. Take accurate measurements of the kitchen area and think about how much storage you'll need. Make a detailed blueprint with bottom cabinets, upper cabinets, appliances, and possibly a kitchen island. Measuring and preparing ahead of time will assist ensure that everything falls into place and will save you time and frustration later.

Installed Cabinets & Hardware

The installation of cabinetry is the initial stage in any kitchen design. The finish of the cabinets and the hardware used will help to establish an overall look for the area because they are the largest furnishings in the room. Long, linear cabinet pulls and a high-gloss finish keeps things clean and modern or opts for oil-rubbed bronze hardware and more rustic cabinets for a more casual, industrial feel.

Adding a Kitchen Backsplash & Countertop

A durable countertop and a coordinated kitchen tile backsplash are essential for a functional kitchen. Popular countertop materials include granite, quartz, and Corian, to name a few. Glass, metal, and tile backsplashes are easy to clean and provide a way to add a dash of color to the kitchen.

Selecting a Sink

Installing the appropriate kitchen sink might make dishwashing seem less of a job. There are a variety of sink styles to choose from, including:

- Drop-In Sinks
- Undermount Sinks
- Farmhouse Sinks
- Single-Bowl Sinks
- Double-Bowl Sinks
- Cast-Iron Sinks
- Stainless Steel Sinks

Selecting a Faucet

A kitchen would not be complete without a matching faucet and drain. We have a variety of pre-matched sets ready to install for even greater simplicity. Kitchen faucets come in a variety of styles, including:

- Pull-Down Faucets
- Pull-Out Faucets
- Touch/Touchless Faucets
- Bridge Faucets
- Single-Handle Faucets
- Double-Handle Faucets

Consider adding a bar or prep sink to the kitchen island to increase the space's functionality. Other useful improvements include a pot filler and a hot and cold-water dispenser.

GENESIS
SERIES

Handmade
Zero Radius
Stainless Steel
18 gauge Sinks

The offset drain offers a way to add more surface area to your prep space. With the most popular Micro and Zero Radius undermount sizes able to be placed in left or right position, you choose what makes the most sense for you! To add to your options, 9 inch deep Apron-front sinks are also available with offset drains to the left, creating even more possibilities!

Faucet Styles

Different faucets can perform different tasks around your kitchen sink. Make sure to find the one that fits your needs as well as your style.

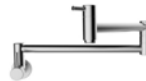

Pull Down Faucets - Pull-down faucets have a high, arched neck known as a gooseneck, and the spout points directly down into the sink basin, making them excellent for filling pots and washing cookware. The faucet head is connected to a short spray hose that can be drawn down and slanted in different directions, allowing the faucet head to function as a sprayer head.

Pull Out Faucets - Pull-out faucets have a more progressive inclination to the base and a shorter spout that points upward instead of into the sink. The faucet head is connected to a larger hose that pushes outward for a wider range of motion, making it easier to cover all areas of the kitchen sink.

Bar Faucets - Bar faucets (also known as prep faucets) feature a smaller body size and a narrower valve configuration, making them ideal for use with smaller, narrower sinks. They usually have a long gooseneck for filling or rinsing glasses or vases, among other things.

Pot Fillers - Pot filler faucets are often located above the stove on the wall. They include a hinged, flexible neck that allows the faucet to extend wider over the sink for usage before folding back against the wall to be stored out of the way. They have a higher flow rate than a standard kitchen faucet.

Water Dispensers - Water dispensers are small, single-hole set faucets that dispense purified cold or hot water using water filters. They're built specifically for filling drinking glasses one at a time.

Pre-Rinse Kitchen Faucets - A high-arched, high-pressure spray nozzle is attached to a coil-guided spray hose and fastened to the spout by a support bar on pre-rinse faucets. They're also known as restaurant or commercial faucets, and they're essential for removing food waste from plates before washing them.

Pre-Rinse Faucets - A high-arched, high-pressure spray nozzle is attached to a coil-guided spray hose and fastened to the spout by a support bar on pre-rinse faucets. They're also known as restaurant or commercial faucets, and they're essential for removing food waste from plates before washing them.

Single Handle Faucets - A single handle faucet's basic, single-hole form allows for quick and straightforward operation in a variety of styles and functions.

Faucet Features to Look For

New technologies for the kitchen faucet have come from modern improvements in kitchen design, while some existing features have been around for years. They're made for your convenience, so choose the ones you think will be the most useful for your household and budget.

- **Touch/Touchless Kitchen Faucets** - Touch or touchless faucets use sensors rather than handles or levers attached to the spout body to turn the water on and off based on hand movements, bringing hands-free technology into the kitchen.
- **Kitchen Faucets with Sidespray** - Some faucets come with matching side sprays that match the style and design of the faucet.
- **Magnetic docking** - Magnetic docking allows the faucet head to magnetically mount to the spout on pull down or pull out faucets, making one-handed operation easier and faster.
- **Flow Rate/GPM** - The flow rate is the amount of water released by the faucets per minute in gallons. The normal faucet has a flow rate of 2.2 gallons per minute (or GPM), and many contemporary faucets incorporate water-saving technologies that help save water without compromising the faucet's functionality.
- **Escutcheon Included** - An escutcheon is a beautiful plate that complements the faucet's aesthetic while also concealing any unused holes in the deck. For example, if a single hole faucet is installed in a sink with three holes, an escutcheon can be used to conceal the previously unused holes and sealed to prevent water damage beneath the sink.

Faucet Styles

Different faucets can perform different tasks around your kitchen sink. Make sure to find the one that fits your needs as well as your style.

Single Hole Faucets - This is the most popular design for a clean and modern look right now. By adding an escutcheon plate to cover any unused faucet holes, many single hole faucets may be adapted to operate with most sinks. As a result, they're extremely adaptable as well as elegant and functional.

Vessel Faucets - While single hole faucets are also available, these are designed to work with vessel sinks. They are higher and made to sit over a vessel sink's elevated style.

Widespread Faucets - This is a traditional bathroom faucet design. With two handle styles, this piece is both timeless and utilitarian. A new broad faucet may breathe new life into your bathroom without the cost of a full redesign.

Centerset Faucets - Centerset faucets give a very tidy appearance. The base hides the faucet and clears the counter-top of clutter.

Mini Widespread Faucets - This is exactly what it sounds like: a scaled-down version of the popular. These faucets are smaller and sit closer together than centersets, but they lack the "base" of a centerset.

Flow with Style

One of the most often used fixtures in your home is the bathroom sink faucet. All of your guests, in addition to you and your family, utilize the bathroom faucet. Bathroom faucets must be both practical and of high quality to last a long time. They're also a terrific method to flaunt your individual style.

Ceramic disc - Ceramic disc valves are typically operated with a single lever, with the handle spinning to control flow and temperature. Because the cartridge inside the faucet is made up of two toughened, corrosion-resistant ceramic discs, the operation is straightforward.

DSW-WHE01W

Wall Hung Toilet Bowl

- Elongated bowl
- Water saving flush system
- Soft-close seat included
- High quality glaze that resist stains and microbes
- Requires Tank: DSW-WHT00W (sold separately)

DSW-WHE02W

Wall Hung Toilet Bowl

- Elongated bowl
- Water saving flush system
- Soft-close seat included
- High quality glaze that resist stains and microbes
- Requires Tank: DSW-WHT00W (sold separately)

DSW-WHT00W

Tank for Wall Hung Toilet Bowl

- .8 gpf or 1.6 gpf
- steel tube frame
- insulated tank
- adjustable from 15-3/4" to 28-1/2"
- large removable flush actuator plate opening for easy tank access
- Used with DSW-WHE01W or DSW-WHE02W (sold separately)

Wisper Quiet
Motor
~ 65dB - 68dB

DSA-WD5000

DELUXE 1-1/4 HP
GARBAGE DISPOSAL
UNIT

KEY FEATURES:

- 1-1/4(1.25) Horse Power Motor
- 2500 RPM Grinding Speed
- 120V/7.8 Amps
- Includes Built-In Air Switch

US-WM2018W

Wallmount Lavatory Sink

- Wall mounted
- Porcelain
- Single Bowl
- Bathroom Sink
- Three Hole Faucet Installation

USF-00S8W00

8" Widespread Service Faucet
w/Support Arm

- Cartridge: ceramic
- Two-hole mount
- Mounting Type: Wall
- WITHOUT pop-up drain

USF-00SSH00

Push Button Faucet w/Timed Release

- Cartridge: Ceramic
- Aerator: ABS
- Braided Hose
- INCLUDED pop-up drain

USF-00BSH07

Single Handle Stainless Steel Hands Free Sensor Faucet

- Infrared Sensor for Touchless Operation
- 6-volt DC Plug-in Adaptor (included)
- Single line water supply
- Water Supply connector with high pressure flexible hose
- Sensor Range: 2.5"
- Factory Default timeout: 30 seconds

Flow Rate
• 1.5 gpm max
@ 60 psi
Includes
• Push pop-up
drain with
overflow

USF-00BSH08

Hands Free Bathroom Sensor Faucet w/Temp Control

- Infrared Sensor for Touchless Operation
- 6-volt DC Plug-in Adaptor (included)
- Dual Line water supply for hot and cold
- Handle controlled water temperature
- Water Supply connector w/high pressure flexible hose
- Sensor Range: 2.5"
- Factory Default timeout: 30 seconds

Flow Rate
• 1.5 gpm max
@ 60 psi
Includes
• Push pop-up
drain with

• 1.5 gpm max
@ 60 psi
Includes
• Push pop-up
drain with
overflow

USW-LFV00

Lever Flush Valve

- Use With: Floor-Mounted Toilet Bowls
- Lever Flushometer includes outlet pipe
- (1-1/2") Inlet NPT 3/4"
- 1.28 gpf Water Efficiency
- Available in Chrome

USW-SFV00

Hands Free Sensor Flush Valve

- Use With: Floor-Mounted Toilet Bowls
- Sensor Flushometer includes outlet pipe
- (1-1/2") Inlet NPT 3/4"
- 1.28 gpf Water Efficiency
- Available in Chrome

USW-LFV01

Lever Flush Valve

- Use With: Wall-Hung Urinal
- Lever Flushometer includes outlet pipe
- (1-1/2") Inlet NPT 3/4"
- 1.28 gpf Water Efficiency
- Available in Chrome

USW-SFV01

Hands Free Sensor Flush Valve

- Use With: Wall-Hung Urinal
- Sensor Flushometer includes outlet pipe
- (1-1/2") Inlet NPT 3/4"
- 1.28 gpf Water Efficiency
- Available in Chrome

USW-2EV00W

Floor mounted Toilet Bowl

- Toilet Bowl for use with flushometer
- Elongated Bowl
- ADA Compliant seat height
- Includes 1.5" Connecting valve (SPUD)
- Fully-glazed 2" trapway

USW-1UWM00W

Wall Hung Urinal

For use with flushometer valve not included

- Recommended Valves:
- USW-SFV00CR
 - USW-LFV00

USW-1UWM01W

Wall Hung Urinal

For use with flushometer valve not included

- Recommended Valves:
- USW-SFV00CR
 - USW-LFV00

Brushed Nickel Finish Care Instructions

Use a damp cloth to remove light dirt

Dampen a soft piece of cloth with clean water, and wipe down the surface of the faucet daily to remove dirt before it accumulates. Use a cotton ball sprayed with glass cleaner to clean the base of the finish or any hard-to-reach areas. Make sure the glass cleaner does not contain ammonia or alcohol.

Scrub away hard water stains

Spray a soft cloth with a mixture consisting of equal parts water and vinegar. Use the cloth to scrub away heavy water stains on the nickel finish, or to remove built up dirt.

Rinse the finish

Rinse the finish with a clean, damp cloth after cleaning it with the glass cleaner or vinegar cleanser. Rinse out the cloth as needed to rid it of the residue of the cleansers, dampening it again to continue rinsing the finish. Dry the finish with a soft dry cloth.

Wax the finish

Return the shine to the finish by spreading a layer of paste wax over the finish. Waxing is required about every four weeks. Spread the wax using a soft dry cloth, working it over the surface of the nickel in a small circular motion. After covering the finish, buff it to a shine using another dry soft cloth.

WARNING

- Avoid bleach.
- Do not use cleaners that contain alcohol or ammonia to clean brushed nickel.
- Abrasives should never be used, as they may affect the finish.
- Acidic substances left on the nickel finish for extended periods of time may leave a slight dark mark, but this is easily removed with a chrome polish.
- Do not use abrasive cleaning pads.
- Never leave rubber mats, sponges, towels, or cleaning pads in the sink overnight as this will trap water and could stain and discolor the sink surface.

Porcelain Care & Cleaning Instructions

STEP 1: Gently clean with liquid soap and dry.

- Using warm water, liquid soap, and a sponge, gently clean the porcelain sink. Remove any food, soap, or toothpaste build-up from the surface. This will allow you to identify any stains or scuff marks that require a deeper clean. Wash away all soapy residue, and dry with a dish towel.

STEP 2: Skip scrubbing, and remove discoloration using bleach on white porcelain and hydrogen peroxide on colored porcelain sinks.

- Harsh scrubbing can damage porcelain, so your first line of attack should be the least abrasive. For white porcelain only, bleach can be used to remove stains; never use chlorine bleach in colored or vintage porcelain, as it can damage the finish. For both white and colored porcelain, liquid oxygen bleach (such as hydrogen peroxide) is a good alternative. It may take longer to work, but is less caustic and more environmentally friendly.
- Pour the bleach product suited to your type of porcelain into a spray bottle. Cover your sink with a layer of paper towels. Spray bleach or oxygen bleach over the towels, allowing it to soak in thoroughly, and let sit for 30 minutes to an hour. Discard the bleached paper towels, and rinse sink completely with clean water. If concerned about putting any kind of bleach on an antique porcelain sink, use white vinegar instead. Add undiluted white vinegar to a spray bottle and spray the sink, then use a non-abrasive sponge and circular motions to clean the porcelain. Rinse thoroughly with water. If the stains don't lift completely and you decide to try oxygen bleach, remove all traces of vinegar first to avoid the harmful side effects of combining vinegar and bleach.

STEP 3: Tackle deeper stains with a mild abrasive.

- If you don't feel comfortable using bleach, try lifting stain with a gentle abrasive. There are many abrasive cleansers on the market, and not all are designed for porcelain. One safe and effective liquid is Bar Keepers Friend®. Squirt a small amount into the sink and gently scour the surface with a non-abrasive sponge. Its oxalic acid will lift stains, but be sure to use the product sparingly or risk discoloring and scratching your porcelain.
- Lift metal stains with a little bit of acid or naval jelly.
- Tackle silverware stains and orange/red rust separately, using these methods: Add a few drops of lemon juice or white vinegar directly to a metal stain. Do not mix acids! Let sit for several minutes, monitoring the color of the stain. Do not scrub. Remove with water. For rust stains, use Naval Jelly®. Apply a thin coat to the stained area, monitor carefully, and rinse as soon as you notice a change in the color of the stain. Naval Jelly® is primarily used to remove rust from metal, so exercise caution and rinse it quickly from porcelain as soon as the stain lifts.

Dakota Care Information

Copper Care Instructions

DAILY

- When you finish using your sink, adopt the simple rinse and wipe method. When water dries, it often leaves behind unsightly calcium stains, which may alter the appearance in an undesirable way. In addition, when food is allowed to sit on the surface of the sink, any acids within the food can alter the finish. So just remember to rinse with water and wipe with a dish towel.

NOTE: Since copper is a natural anti-bacterial surface, it is not necessary to disinfect or scrub your copper, since the sink does it for you.

WHEN NEEDED

- If you feel the surface has lost its luster, use a clear mild non-citrus liquid dish soap with a no-scratch sponge to gently scrub the entire surface. Rinse with water and wipe with a dish towel.

NOTE: you may notice some brown spots on your sponge when you do this. Do not worry, it is perfectly normal. You are scrubbing off some of the patina that has built up over time. To further enhance the beauty of the finish and add an extra layer of protection from food related acids, this is a good time to use wax.

CARING FOR LIGHT SPOTS

- If something strips the patina, do not worry, your copper surface has a living finish. The patina will naturally regenerate with time. The best thing to do is clean the area with clear mild soap and no-scratch sponge to remove any remaining acid or chemical. Do not wax the sink until the spots have darkened back with natural patina. The more water and oxygen that come in contact with the raw spots, the faster they will patina. Waxing will slow the natural darkening process as it protects the surface from the environment. Use your sink as you normally would and you will notice the spots will darken and blend back into the sink.

AVOID

- All cleaning products that contain abrasives, ammonia, bleach, and alcohol. All will strip the patina and expose the raw copper.

Quartz Composite Sink Care & Maintenance

- Quartz sinks are designed to meet the demands of modern living. Follow these general instructions to care for and maintain your quartz sink.

CLEANING

- Clean your quartz sink regularly using a non-abrasive sponge and dishwashing soap. Rinse and dry completely with a clean, soft cloth.

SURFACE LUSTER

- Clean, rinse and dry sink completely. To restore luster and extend the time between cleanings apply a thin, even coating of Quartz Sink Conditioner, food-safe mineral oil, or olive oil to the entire sink surface with a cloth. Remove excess with a cloth or leave overnight. Reapply as needed.

REMOVE SCUFS AND STAINS

- Use a magic eraser sponge to remove light scuffs, stains, and metallic marks. On stubborn areas use a soft scouring pad and mild abrasive cleaner (Soft Scrub® or Bar Keeper's Friend®). Clean, rinse and dry sink completely then apply Quartz Sink Conditioner.

SURFACE DEPOSITS

- To remove hard water, calcium or lime use Lime Away® or CLR® cleaner. Alternatively use white vinegar on a paper towel and rinse after 20 minutes.

TIPS

- Quartz sinks are versatile and durable. However, no sink is scratch-proof. Take care when handling heavy objects and ceramicware in the sink. Use the optional protective bottom grids(s) and regularly clean the sink and apply Quartz Sink Conditioner or olive oil to ensure years of enjoyment and service in your home.
- Metallic surface marks occur when small amounts of metal from utensils and pots & pans are removed when rubbed across the high harness quartz surface. Such cosmetic marks are most visible on light colored sinks and can easily be removed with a magic eraser sponge. Use the optional protective bottom grids(s) and regularly clean the sink and apply Quartz Sink Conditioner or olive oil to ensure years of enjoyment and service in your home.

- DO NOT** use abrasive cleaners, abrasive scouring pads, metal-scouring pads, bleach or alkali cleaners such as ammonia, and do not use the sink for cleaning paint or grout materials. If you encounter staining liquids, such as dyes or juices, rinse off as soon as possible.
- If a color-matched disposal flange is installed it should be removed periodically and cleaned with a non-abrasive sponge and dishwasher soap.

CHOOSING A MATERIAL

Choosing a material for your sink is one of the most important decisions you will make. Here are some tips to make that decision a little easier.

Stainless Steel

Stainless Steel sinks provide an elegant look to

any kitchen no matter the style. These are the most universal option when choosing a sink for your kitchen. This finish often coordinates with the rest of your appliances, giving the space a cohesive look.

Copper

The warm tone of Copper sinks makes them

an eye catching addition to your bar or kitchen island. Pure copper sinks come either molded or welded, and are one of the most high-maintenance options for sinks as they need to be polished regularly to avoid patina.

Fireclay

Fire Clay sinks add a unique old school farmhouse

style to any kitchen. Classic and durable fireclay sinks take advantage of modern technology allowing porcelain to be baked at very high temperatures creating an additional resistance to chipping and breaking.

Quartz Composite

Quartz Composite

sinks are both elegant and incredibly durable. They are heat, scratch, and chip resistant. They come in an array of color options, making it easy to coordinate the sink with any cabinet and countertop. This material has a more traditional and timeless style.

FAQs

Why should I register my product?

If you ever need to contact us for help or warranty, registering your product immediately establishes a reference of your product.

What should I do if I realize I'm missing faucet parts?

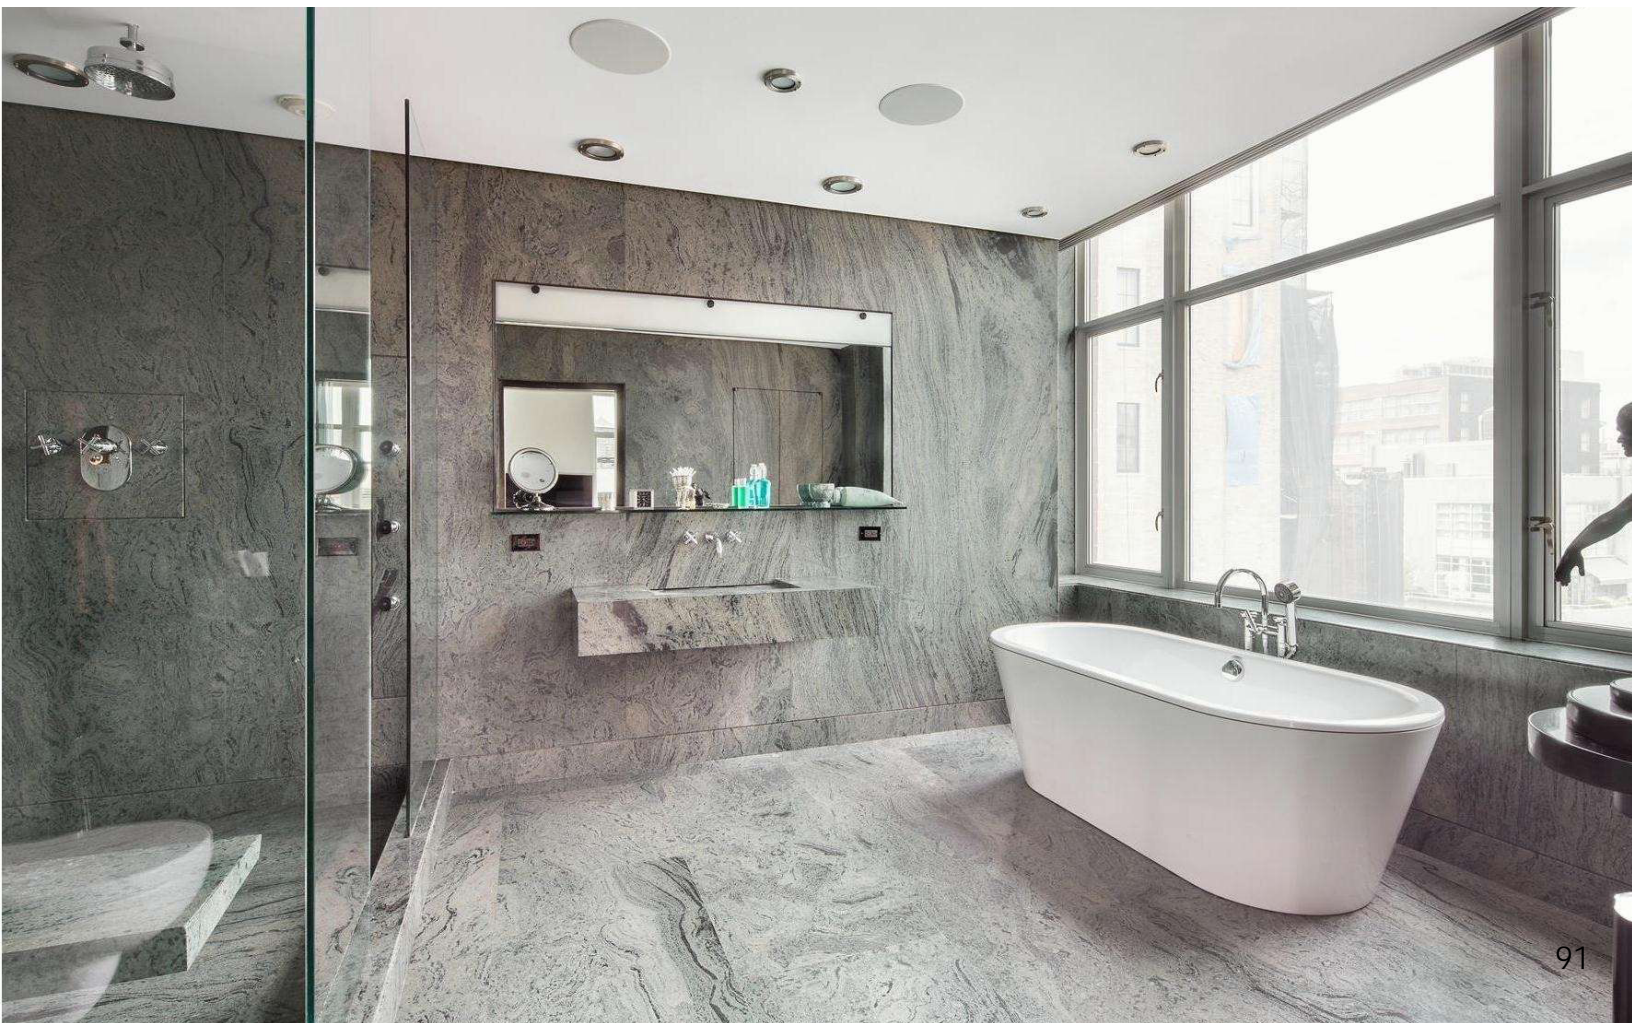

The best method is to write or call us directly. You can also check with the place where you purchased the faucet.

Where can I find the .dxf files and what are they?

All .dxf files are located on the individual product page. These files are guides for cnc machines to use when templating the cutout of a sink or other item.

Where can I find installation files for faucets?

Installation files are located on the individual product pages of each item. If an installation file does not exist or if you are having an issue opening the file please email help@dakotasinks.com
